

Vibe Coding Project 1

RunSignup

There's Daniel, who guides with great cheer,

And Joel, making code disappear.

With vibes set just right,

They'll build apps in plain sight—

So welcome, we're glad you are here!

Agenda

- Intro to Vibe coding
- Project 1 with v0
- Q/A

Al generates React coo

RUNNING EV

What is Vibe Coding?

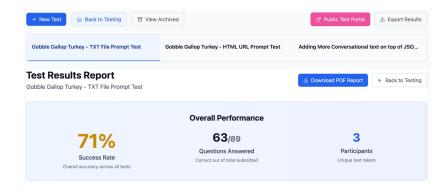

- Using Al tools to turn ideas into code quickly
- No heavy setup → just describe what you want,
 and v0 or similar tools builds it
- No dev experience needed. It helps but not needed.
- Focused on fun, experimentation, and rapid prototyping
- Goal: lower the barrier so anyone can create
- Only about a year old. Most of the vibe coding platforms started in 2024.

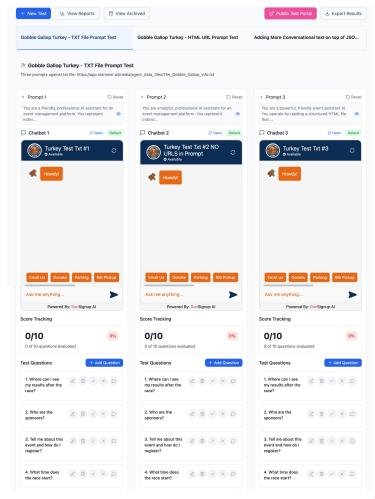

Al Charbot

Why Vibe Coding?

- Makes coding accessible to non-developers
- Encourages creativity → photography portfolios, race/weather mashups, simple apps to help build out systems
- Great for fast idea testing without full dev effort
- Builds confidence by starting small and learning through play

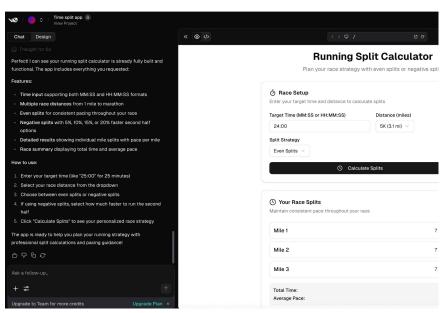

Additional Features

v0: The Core Tool in this Series

- Vercel's AI coding platform v0→ central tool for this webinar series
- Generates UI, components, and full apps from prompts
- Integrated hosting + deployment for instant results
- Everyone in this series will use v0 exclusively to build their projects

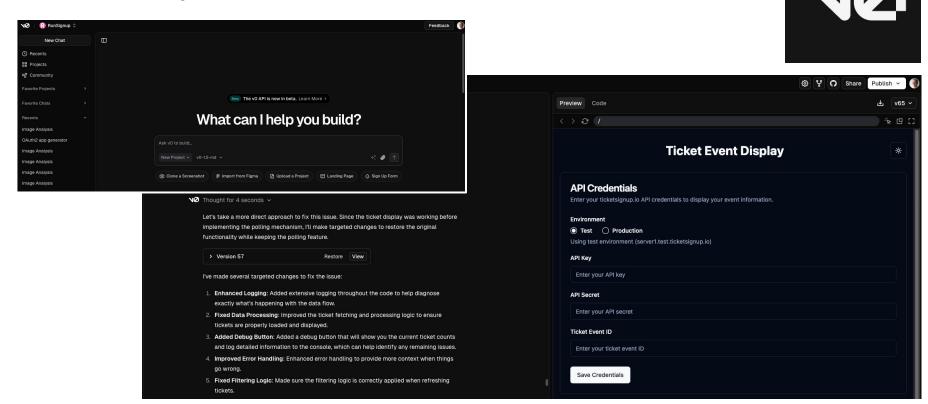

What is **V0 & Vercel**

• • •

V0: Development

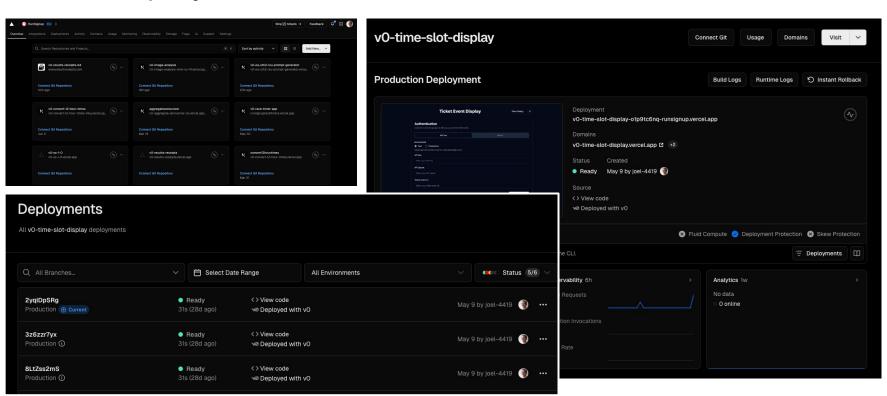

• • •

Vercel: Deploy And Host

Other Tools Worth Knowing

(We'll mention but not demo — to keep focus on v0)

- ChatGPT broad AI model, great for quick prompting
- Claude strong for writing and debugging code
- **Replit** online coding + collaboration platform
- Gemini excels in long-form explanations and research
- bolt.new instant playground for spinning up projects
- Lovable Al-assisted app builder for simple projects

broad AI model, reat for quick prompting

strong for writing and debugging code

online coding + collaboration platform

excels in long-form explanations and research

instant playground for spinning up projects

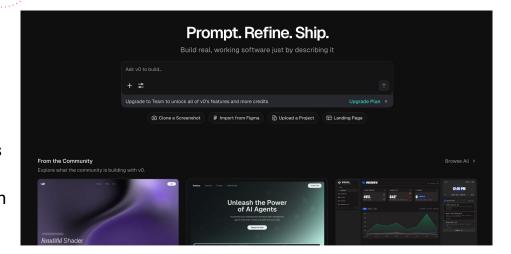

Al-assisted app builder for simple projects

Additional Features

Getting Started

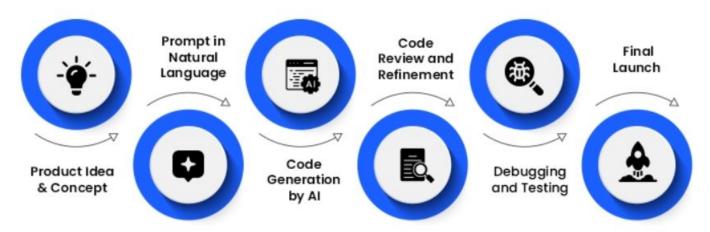

- Open v0 (https://v0.app) → describe what you want → iterate quickly
- Start with a "fun" project (e.g., joke app, photography site, to-do list)
- Don't worry about mistakes → live debugging is part of learning
- Tip: build around your hobbies for maximum fun

Vibe Coding Workflow

Vibe Coding Workflow

Vibe Coding Demo Project 1 & Mini Project

Goals for today's Vibe Coding

- Build a mini split test calculator
- Call the RunSignup API and show how to implement a weather API and possibly a map API.
- Have fun!

• • •

You've vibed with us all through the show, Now it's your turn to give it a go.

Thanks for joining today,

May your projects all slay—

And may Vibe Coding help them to grow!
